

Figure 1: The proposed system architecture.

The proposed system architecture is shown in Figure 1. The system is designed to be a distributed system, where the data is stored in a distributed database and the processing is done in a distributed manner.

4.1. System Architecture

The system architecture is shown in Figure 1. The system is designed to be a distributed system, where the data is stored in a distributed database and the processing is done in a distributed manner. The system is designed to be a distributed system, where the data is stored in a distributed database and the processing is done in a distributed manner.

The system is designed to be a distributed system, where the data is stored in a distributed database and the processing is done in a distributed manner. The system is designed to be a distributed system, where the data is stored in a distributed database and the processing is done in a distributed manner.

4.2. Data Flow

The data flow is shown in Figure 2. The data is collected from various sources and is then processed by the system. The data is then stored in a distributed database and is available for processing by the system. The data is then stored in a distributed database and is available for processing by the system.

The data is then stored in a distributed database and is available for processing by the system. The data is then stored in a distributed database and is available for processing by the system. The data is then stored in a distributed database and is available for processing by the system.
